

CLAIMS

1. An adaptor for a braking deceleration device for doors or movable furniture parts, which essentially comprises a plunger which can be pushed into a housing against a braking force, with an adaptor body (10),

characterised in that

in the adaptor body (10) at least one accommodation recess for accommodating the housing of the braking deceleration device is made, and in that the adaptor body (10) comprises suitable means by way of which it can be fixed to an attachment plate and via it to the frame or furniture carcass.
2. The adaptor according to claim 1, characterised in that said adaptor is attached to the sidewall of the furniture carcass on which the hinges are arranged.
3. The adaptor according to claim 2, characterised in that the viscosity of the damping liquid is at least 15,000 cSt, preferably 20,000 cSt.
4. The adaptor according to any one of claims 1 to 3, characterised in that the attachment plate comprises a clip installation plate (14) with projections (22) for accommodating corresponding recesses (26) in the adaptor body (10), lateral end stops (48) and an end hook (24) for engaging projections (28) in the adaptor body (10).
5. The adaptor according to claim 4, characterised in that the adaptor body (10) comprises recesses (26) for engagement of corresponding projections (22) of the clip installation plate (14) and projections (28) for engaging the hook (24).

6. The adaptor according to any one of claims 1 to 5, characterised in that the clip installation plate (14) consists of a base plate (32) and an intermediate plate (34) which is longitudinally slidable on said base plate (32).
